

SECTOR: Utilities
 CLIENT: Severn Trent Water

PROJECT: Establishing a standardised best practice approach for Production Control

BACKGROUND: In-line with the service delivery and value for money improvement objectives set by OFWAT for the Water Industry, Severn Trent Water embarked on a Efficiency programme covering standardized plant design, process improvement and enhanced project delivery performance. tbi were engaged to help define and implement a standardized best practice approach for production control – the key process for improving project delivery.

WHAT WE DID: • Developed a 4-5 step structured approach for Production Control (PC) that was based on recognised best practice for collaborative planning and project management

- PC processes comprised two steams:
 - Pre-construction
 - Construction
- Established standard programme performance measurement and benefits realisation processes
- Training programme and support materials developed
- Representatives from all framework partners (9 in all) plus Severn Trent trained, coached and mentored to develop capability for consistent application of PC processes
- Skill and competency audit process established to 'sign-off' PC competence

BENEFITS: • A standard best practice approach for Production Control (PC) established across the framework

- 16 'champions' trained and signed-off as competent PC practitioners
- Improved programme delivery
 - Pre-construction readiness
 - On-site construction delivery
- Contributed to the programme and cost efficiency savings for AMP6
 - 177 weeks saved, value of savings = 10% of project
